Maintenance and reported-problem research

First partial batch | reviewed October 5, 2026 | U.S. catalog

Private review files only. No database ingestion, public release, migration, or changes to vehicle profiles are part of this batch.

Coverage and meaning of verification

Catalog: 4,661 model/year profiles across 13 brands. This batch contains 12 maintenance facts for two profiles and six selected NHTSA complaint records across three profiles. The other 4,658 profiles have no evidence drafts from this batch. Even these three profiles are not fully researched.

Source-checked means a statement matches the cited record. It does not mean an alleged failure or odometer value has been independently proved. The six complaints are examples, not a representative sample. They do not establish a common problem, typical failure mileage or failure rate.

Publication and source-use decisions

NHTSA: the Data.gov record explicitly declares a public-domain license. Retain normalized factual fields, complaint IDs and source links. Do not assume this permits copying manufacturer documents, third-party expression or private information. No complaint narratives are bundled.

OEM sources: Ford, Chevrolet and Tesla website terms were inspected; they restrict commercial copying or reuse of site materials. These restrictions do not make all independent vehicle facts copyrighted, nor require a blanket brand license. The exact contractual access and commercial factual-normalization use still need review.

Attribution is not permission. Fact checks, configuration applicability and source-use decisions are separate gates. All OEM maintenance records remain withheld from publication. This report is not legal assurance; obtain qualified advice for unresolved intended uses.

2024 Chevrolet Silverado 1500: partial maintenance

Official GM-hosted owner manual: 85516379C, March 4, 2024, third printing. Maintenance pages 425-427 (PDF pages 426-428). Gasoline scope only; diesel supplements and exact retail configurations were not reviewed. The catalog's broader Silverado family is not blanket applicability.

Tire rotation: 7,500 miles. normal service. Gasoline Silverado 1500; tire configuration may restrict rotation. [Printed page 425; PDF page 426]

Cabin filter replacement: 22,500 miles / 24 months. normal service. Whichever occurs first; dusty or polluted use may need earlier replacement. [Printed page 426; PDF page 427]

Spark-plug replacement: 60,000 miles. normal service. 2.7L turbo gasoline engine only; inspect wires/boots. [Printed page 426; PDF page 427]

Spark-plug replacement: 97,500 miles. normal service. 5.3L or 6.2L gasoline V8 only; inspect wires/boots. [Printed page 426; PDF page 427]

Cooling-system service: 150,000 miles / 72 months. normal service. Whichever occurs first; reviewed gasoline manual, not a diesel supplement. [Printed page 426; PDF page 427]

Transmission fluid and filter service: 45,000 miles. severe service. Severe service only, including frequent towing and qualifying demanding use; not a normal-service interval. [Printed page 427; PDF page 428]

Transfer-case fluid service: 50,000 miles. severe service. Severe service and four-wheel drive only. [Printed page 427; PDF page 428]

Brake-fluid replacement: 60 months. normal service. Calendar interval; do not invent a mileage interval. [Printed page 427; PDF page 428]

Tesla Model 3: current 2024+ manual, partial maintenance

Official North American online manual. Root identifies 2024+ and software version 2026.32. These are current recommendations, not an archived 2024 factory schedule. Confirm the individual vehicle manual.

Cabin filter replacement: 24 months. Normal use; conditions can require a different interval.

Wiper-blade replacement: 12 months. Recommended annual interval; replace sooner when condition requires.

Brake-caliper cleaning and lubrication: 12,500 miles / 12 months. Winter-road-salt condition only; preserve both time and distance triggers.

Tire rotation: 6,250 miles. Or a tread-depth difference of at least 2/32 inch (1.5 mm), whichever occurs first.

The Tesla brake-fluid numeric interval disappeared in extracted text, so it is not included or guessed. Ford Mustang maintenance also remains unverified: the attempted direct PDF returned HTML.

Selected external owner-reported problems

The following numeric failure-mileage values were checked against explicit NHTSA complaint statements. The selected clauses do not print a distance unit, and the API has no structured failure-mileage field. Unit confirmation remains pending: do not publish them with a miles label yet. Exact values are preserved, including the value 4.

2024 FORD MUSTANG | ODI 11765084 | Reported failure-mileage value: approximately 27,500. Filed 09/17/2026; incident 07/07/2026. The owner reports repeated stalling and additional electrical symptoms.

2024 FORD MUSTANG | ODI 11761510 | Reported failure-mileage value: approximately 43,000. Filed 09/02/2026; incident 04/25/2026. The owner reports hesitation under acceleration and electrical warning messages.

2024 CHEVROLET SILVERADO 1500 | ODI 11767383 | Reported failure-mileage value: approximately 54,265. Filed 09/28/2026; incident 09/27/2026. The owner reports an unexpected loss of propulsion while entering a parking lot.

2024 CHEVROLET SILVERADO 1500 | ODI 11763307 | Reported failure-mileage value: approximately 4. Filed 09/10/2026; incident 06/15/2024. The owner reports DEF-level warnings and reduced propulsion while towing.

Quality flag: 4 is the reported value, not 4,000. Unusually low mileage; no correction without further evidence.

2024 CHEVROLET SILVERADO 1500 | ODI 11762693 | Reported failure-mileage value: 15,728. Filed 09/08/2026; incident 08/18/2026. The owner reports stalling; a dealer reportedly replaced the fuel-pump control module.

2024 TESLA MODEL 3 | ODI 11683464 | Reported failure-mileage value: 13,816. Filed 08/27/2025; incident 07/12/2025. The owner alleges braking and steering difficulties preceding a collision.

No repair costs, reliability scores, typical onset range, failure rate or verified diagnosis is inferred from these records. Records remain external reports, not submissions to AutoResearch.

Official maintenance-source directories

Directory checks identify where to obtain evidence. They do not verify every manual, historical year, service interval or use right.

Ford
https://www.ford.com/support/owner-manuals/

Portal checked. Mustang PDF direct retrieval returned HTML; no maintenance interval accepted.

Lincoln
https://www.lincoln.com/support/owner-manuals/

Portal checked; no individual edition or Lincoln source-use terms reviewed.

Chevrolet
https://www.chevrolet.com/support/vehicle/manuals-guides

Portal and one 2024 Silverado 1500 manual checked; commercial content reuse restrictions require review.

Buick
https://www.buick.com/support/vehicle/manuals-guides

Portal checked only; no individual edition or Buick source-use terms reviewed.

GMC
https://www.gmc.com/support/vehicle/manuals-guides

Portal checked only; no individual edition or GMC source-use terms reviewed.

Cadillac
https://www.cadillac.com/support/vehicle/manuals-guides

Portal checked only; no individual edition or Cadillac source-use terms reviewed.

Chrysler, Dodge, Jeep, Ram
https://www.mopar.com/en-us/my-vehicle/explore-the-manual.html

Shared official portal checked; select exact brand/year/model and supplements. Terms not reviewed.

Tesla
https://www.tesla.com/ownersmanual/model3/en_us/

2024+ North America root and chapter checked; website copyright restrictions reviewed. Other models not researched.

Rivian
https://rivian.com/support/support-documents

Official directory checked; individual model/year manuals and terms not reviewed.

Lucid
https://lucidmotors.com/knowledge/vehicles/air/the-basics/lucid-air-essentials

Official Air directory checked; individual model/year applicability and terms not reviewed.

Files and safe next steps

The companion CSVs list maintenance facts, complaint facts, source directories and every catalog profile's research status. JSON is the full structured ledger. No original manuals, screenshots, narratives, VINs or personal information are distributed.

Before any app integration, preserve calendar intervals, whichever-first triggers and service conditions. The current canonical maintenance read-model only exposes mileage. Do not replace time-only intervals with invented mileage or flatten conditional engine/4WD/severe-service scope.
